TELEPERFORMANCE BRAZIL _ PCI RESPONSABILITY MATRIX										
1: Install and maintain network security controls										
PCI DSS requirement	N/A	Teleperformance	Customer	Shared Responsability	Notes					
1.1 Processes and mechanisms for installing and maintaining										
network security controls are defined and understood.		Х								
1.1.1 All security policies and operational procedures that are										
identified in Requirement 1 are: Documented, Kept up to date,		Х								
In use, Known to all affected parties.										
1.1.2 Roles and responsibilities for performing activities in										
Requirement 1 are documented, assigned, and understood.		Х								
1.2 Network security controls (NSCs) are configured and		Х								
maintained.		~								
1.2.1 Configuration standards for NSC rulesets are: Defined,		х								
Implemented and Maintained.		^								
1.2.2 All changes to network connections and to configurations										
of NSCs are approved and managed in accordance with the		х								
change control process defined at Requirement 6.5.1.		^								
1.2.3 An accurate network diagram(s) is maintained that shows										
all connections between the CDE and other networks, including		Х								
any wireless networks.										
1.2.4 An accurate data-flow diagram(s) is maintained that meets										
the following: Shows all account data flows across systems and		N N								
networks. Updated as needed upon changes to the		Х								
environment.										
1.2.5 All services, protocols, and ports allowed are identified,		V								
approved, and have a defined business need.		Х								
1.2.6 Security features are defined and implemented for all										
services, protocols, and ports that are in use and considered to		Х								
be insecure, such that the risk is mitigated.										
1.2.7 Configurations of NSCs are reviewed at least once every		N.								
six months to confirm they are relevant and effective.		Х								
1.2.8 Configuration files for NSCs are: Secured from										
unauthorized access, Kept consistent with active network		Х								
configurations.										
1.3 Network access to and from the cardholder data		N N								
environment is restricted.		Х								
1.3.1 Inbound traffic to the CDE is restricted as follows: To only										
traffic that is necessary. All other traffic is specifically denied.		Х								
1.3.2 Outbound traffic from the CDE is restricted as follows: To										
only traffic that is necessary. All other traffic is specifically		Х								
denied.										
1.3.3 NSCs are installed between all wireless networks and the										
CDE, regardless of whether the wireless network is a CDE, such										
that:										
แลเ.		I	l l		I					

	1				
All wireless traffic from wireless networks into the CDE is		Х			
denied by default.					
Only wireless traffic with an authorized business purpose is					
allowed into the CDE.					
1.4 Network connections between trusted and untrusted		х			
networks are controlled.		^			
1.4.1 NSCs are implemented between trusted and untrusted		N N			
networks.		Х			
1.4.2 Inbound traffic from untrusted networks to trusted					
networks is restricted to:					
Communications with system components that are authorized					
to provide publicly accessible services, protocols, and ports.		Х			
Stateful responses to communications initiated by system					
components in a trusted network.					
All other traffic is denied.					
1.4.3 Anti-spoofing measures are implemented to detect and					
block forged source IP addresses from entering the trusted		Х			
network.					
1.4.4 System components that store cardholder data are not					
directly accessible from untrusted networks.		Х			
1.4.5 The disclosure of internal IP addresses and routing					
information is limited to only authorized parties.		Х			
1.5 Risks to the CDE from computing devices that are able to					
		V			
connect to both untrusted networks and the CDE are mitigated.		Х			
1.5.1 Security controls are implemented on any computing					
devices, including company- and employee-owned devices, that					
connect to both untrusted networks (including the Internet) and					
the CDE as follows:					
Specific configuration settings are defined to prevent threats	1				
being introduced into the entity's network.		Х			
Security controls are actively running.	1				
	1				
Security controls are not alterable by users of the computing					
devices unless specifically documented and authorized by					
management on a case-by-case basis for a limited period.					
2: Apply secure configurations to all system components					
PCI DSS requirement	N/A	Teleperformance	Customer	Shared Responsability	Notes
2.1 Processes and mechanisms for applying secure					
configurations to all system components are defined and		Х			
understood.					
2.1.1 All security policies and operational procedures that are					
identified in Requirement 2 are: Documented. Kept up to date.		Х			
In use. Known to all affected parties.					
2.1.2 Roles and responsibilities for performing activities in					
Requirement 2 are documented, assigned, and understood.		х			
		~			

2.2 System components are configured and managed securely.	x		
2.2.1 Configuration standards are developed, implemented, and			
maintained to:			
Cover all system components.			
Address all known security vulnerabilities.			
Be consistent with industry-accepted system hardening			
standards or vendor hardening recommendations.	Х		
Be updated as new vulnerability issues are identified, as			
defined in Requirement 6.3.1.			
Be applied when new systems are configured and verified as in			
place before or immediately after a system component is			
connected to a production environment.			
2.2.2 Vendor default accounts are managed as follows:			
If the vendor default account(s) will be used, the default			
password is changed per Requirement 8.3.6.	Х		
If the vendor default account(s) will not be used, the account			
is removed or disabled.			
2.2.3 Primary functions requiring different security levels are			
managed as follows:			
Only one primary function exists on a system component, OR			
Primary functions with differing security levels that exist on the	х	х	
same system component are isolated from each other, OR			
Primary functions with differing security levels on the same			
system component are all secured to the level required by the			
function with the highest security need.			
2.2.4 Only necessary services, protocols, daemons, and			
functions are enabled, and all unnecessary functionality is	Х		
removed or disabled.			
2.2.5 If any insecure services, protocols, or daemons are			
present:			
Business justification is documented.	х		
Additional security features are documented and implemented			
that reduce the risk of using insecure services, protocols, or			
daemons.			
2.2.6 System security parameters are configured to prevent	х		
misuse.	^		
2.2.7 All non-console administrative access is encrypted using	х		
strong cryptography.	^		
2.3 Wireless environments are configured and managed	х		
securely.	×		
2.3.1 For wireless environments connected to the CDE or			
transmitting account data, all wireless vendor defaults are			
changed at installation or are confirmed to be secure, including			
but not limited to:	V		
Default wireless encryption keys.	X		
Passwords on wireless access points.			
·			

	1				
SNMP defaults.	-				
Any other security-related wireless vendor defaults.					
2.3.2 For wireless environments connected to the CDE or					
transmitting account data, wireless encryption keys are					
changed as follows:	-				
Whenever personnel with knowledge of the key leave the		Х			
company or the role for which the knowledge was necessary.					
	-				
Whenever a key is suspected of or known to be compromised.					
3: Protect stored account data					
PCI DSS requirement	N/A	Teleperformance	Customer	Shared Responsability	Notes
3.1 Processes and mechanisms for protecting stored account				х	
data are defined and understood.				~	
3.1.1 All security policies and operational procedures that are					
identified in Requirement 3 are: Documented. Kept up to date.				Х	
In use. Known to all affected parties.					
3.1.2 Roles and responsibilities for performing activities in					
Requirement 3 are documented, assigned, and understood.		Х			
3.2 Storage of account data is kept to a minimum.					Teleperformance is responsible only for the screenrecording scenario if applicat
				Х	store data are out of Teleperformance Scope and should be secured by the clien
					supporting.
3.2.1 Account data storage is kept to a minimum through					
implementation of data retention and disposal policies,					
procedures, and processes that include at least the following:					
Coverage for all locations of stored account data.	1				
Coverage for any sensitive authentication data (SAD) stored	1				
prior to completion of authorization. This bullet is a best					
practice until 31 March 2025, after which it will be required as					
part of Requirement 3.2.1 and must be fully considered during					
a PCI DSS assessment.					
Limiting data storage amount and retention time to that which	1				
is required for legal or regulatory, and/or business				Х	Teleperformance Scope covers Teleperformance owned system .
requirements.					
Specific retention requirements for stored account data that					
defines length of retention period and includes a documented					
business justification. Processes for secure deletion or					
rendering account data unrecoverable when no longer needed					
per the retention policy.	-				
A process for verifying, at least once every three months, that					
stored account data exceeding the defined retention period					
has been securely deleted or rendered unrecoverable.					
3.3 Sensitive authentication data (SAD) is not stored after				Х	Teleperformance Scope covers Teleperformance owned system .
authorization.					

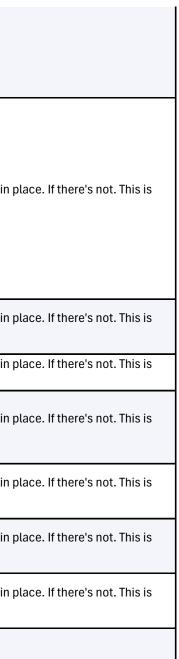

3.3.1 SAD is not retained after authorization, even if encrypted. All sensitive authentication data received is rendered unrecoverable upon completion of the authorization process.				x	Teleperformance Scope covers Teleperformance owned system .
3.3.1.1 The full contents of any track are not retained upon				x	Teleperformance Scope covers Teleperformance owned system .
completion of the authorization process.					
3.3.1.2 The card verification code is not retained upon completion of the authorization process.				Х	Teleperformance Scope covers Teleperformance owned system .
3.3.1.3 The personal identification number (PIN) and the PIN					
block are not retained upon completion of the authorization				х	Teleperformance Scope covers Teleperformance owned system .
process.				~	
3.3.2 SAD that is stored electronically prior to completion of					
authorization is encrypted using strong cryptography.				Х	Teleperformance Scope covers Teleperformance owned system .
3.3.3 Additional requirement for issuers and companies that					
support issuing services and store sensitive authentication data:					
Any storage of sensitive authentication data is:	Х			Х	
Limited to that which is needed for a legitimate issuing	1				
business need and is secured.					
Encrypted using strong cryptography.					
3.4 Access to displays of full PAN and ability to copy PAN is			Х		
restricted.					
3.4.1 PAN is masked when displayed (the BIN and last four digits			Х		
are the maximum number of digits to be displayed), such that					
only personnel with a legitimate business need can see more					
than the BIN and last four digits of the PAN.					
3.4.2 When using remote-access technologies, technical					
controls prevent copy and/or relocation of PAN for all personnel,		х			
except for those with documented, explicit authorization and a					
legitimate, defined business need.					
3.5 Primary account number (PAN) is secured wherever it is				Х	Applicable for Teleperformance whenever there's a screen recording solution in place. If there's n
stored. 3.5.1 PAN is rendered unreadable anywhere it is stored by using					under client system responsability
any of the following approaches: One-way hashes based on strong cryptography of the entire	4				
PAN.					
Truncation (hashing cannot be used to replace the truncated	1				
segment of PAN).					
If hashed and truncated versions of the same PAN, or	4			x	Applicable for Teleperformance whenever there's a screen recording solution in place. If there's n
different truncation formats of the same PAN, are present in					under client system responsability
an environment, additional controls are in place such that					
the different versions cannot be correlated to reconstruct the					
original PAN.					
Index tokens. Strong cryptography with associated key	1				
management processes and procedures.					

vned system .
vned system .
screen recording solution in place. If there's not. This is
screen recording solution in place. If there's not. This is

3.5.1.1 Hashes used to render PAN unreadable (per the first bullet of Requirement 3.5.1 are keyed cryptographic hashes of the entire PAN, with associated key-management processes and procedures in accordance with Requirements 3.6 and 3.7.		K	Applicable for Teleperformance whenever there's a screen recording solution in under client system responsability
3.5.1.2 If disk-level or partition-level encryption (rather than file- , column-, or field-level database encryption) is used to render PAN unreadable, it is implemented only as follows: On removable electronic media OR If used for non-removable electronic media, PAN is also rendered unreadable via another mechanism that meets Requirement 3.5.1.		X	Applicable for Teleperformance whenever there's a screen recording solution in under client system responsability
 3.5.1.3 If disk-level or partition-level encryption is used (rather than file-, column-, or field–level database encryption) to render PAN unreadable, it is managed as follows: Logical access is managed separately and independently of native operating system authentication and access control mechanisms. Decryption keys are not associated with user accounts. Authentication factors (passwords, passphrases, or cryptographic keys) that allow access to unencrypted data are stored securely. 		K	Applicable for Teleperformance whenever there's a screen recording solution in under client system responsability
3.6 Cryptographic keys used to protect stored account data are secured.		x	Applicable for Teleperformance whenever there's a screen recording solution in under client system responsability
 3.6.1 Procedures are defined and implemented to protect cryptographic keys used to protect stored account data against disclosure and misuse that include: Access to keys is restricted to the fewest number of custodians necessary. Key-encrypting keys are at least as strong as the data-encrypting keys they protect. Key-encrypting keys are stored separately from data-encrypting keys. Keys are stored securely in the fewest possible locations and forms. 		X	Applicable for Teleperformance whenever there's a screen recording solution in under client system responsability
 3.6.1.1 Additional requirement for service providers only: A documented description of the cryptographic architecture is maintained that includes: Details of all algorithms, protocols, and keys used for the protection of stored account data, including key strength and expiry date. Preventing the use of the same cryptographic keys in production and test environments. This bullet is a best practice until 31 March 2025, after which it will be required as part of Requirement 3.6.1 and must be fully considered during a PCI DSS assessment. Description of the key usage for each key. 		X	Applicable for Teleperformance whenever there's a screen recording solution in under client system responsability

in place. If there's not. This is

	 _	-		
Inventory of any hardware security modules (HSMs), key management systems (KMS), and other secure cryptographic devices (SCDs) used for key management, including type and location of devices, as outlined in Requirement 12.3.4.				
 3.6.1.2 Secret and private keys used to encrypt/decrypt stored account data are stored in one (or more) of the following forms at all times: Encrypted with a key-encrypting key that is at least as strong as the data-encrypting key, and that is stored separately from the data encrypting key. Within a secure cryptographic device (SCD), such as a hardware security module (HSM) or PTS-approved point-of-interaction device. As at least two full-length key components or key shares, in accordance with an industry-accepted method. 			X	Applicable for Teleperformance whenever there's a screen recording solution in p under client system responsability
3.6.1.3 Access to cleartext cryptographic key components is restricted to the fewest number of custodians necessary.			X	Applicable for Teleperformance whenever there's a screen recording solution in p under client system responsability
3.6.1.4 Cryptographic keys are stored in the fewest possible locations.			Х	Applicable for Teleperformance whenever there's a screen recording solution in p under client system responsability
3.7 Where cryptography is used to protect stored account data, key management processes and procedures covering all aspects of the key lifecycle are defined and implemented.			Х	Applicable for Teleperformance whenever there's a screen recording solution in p under client system responsability
3.7.1 Key-management policies and procedures are implemented to include generation of strong cryptographic keys used to protect stored account data.			Х	Applicable for Teleperformance whenever there's a screen recording solution in p under client system responsability
3.7.2 Key-management policies and procedures are implemented to include secure distribution of cryptographic keys used to protect stored account data.			x	Applicable for Teleperformance whenever there's a screen recording solution in p under client system responsability
3.7.3 Key-management policies and procedures are implemented to include secure storage of cryptographic keys used to protect stored account data.			Х	Applicable for Teleperformance whenever there's a screen recording solution in p under client system responsability
 3.7.4 Key management policies and procedures are implemented for cryptographic key changes for keys that have reached the end of their cryptoperiod, as defined by the associated application vendor or key owner, and based on industry best practice and guidelines, including the following: A defined cryptoperiod for each key type in use. A process for key changes at the end of the defined cryptoperiod. 			X	Applicable for Teleperformance whenever there's a screen recording solution in p under client system responsability
3.7.5 Key management policies procedures are implemented to include the retirement, replacement, or destruction of keys used to protect stored account data, as deemed necessary when: The key has reached the end of its defined cryptoperiod.				

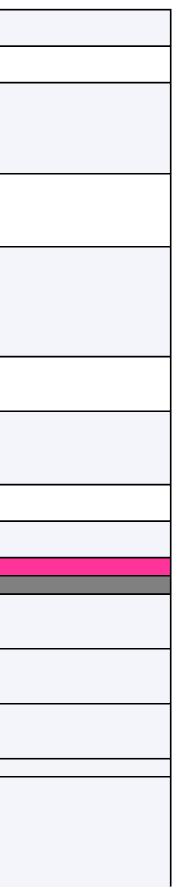

in place. If there's not. This is

The integrity of the key has been weakened, including when				х	Applicable for Teleperformance whenever there's a screen recording solution in
personnel with knowledge of a cleartext key component leaves				^	under client system responsability
the company, or the role for which the key component was					
known.					
The key is suspected of or known to be compromised.					
Retired or replaced keys are not used for encryption					
operations.					
3.7.6 Where manual cleartext cryptographic key management					
operations are performed by personnel, key-management					
policies and procedures are implemented include managing				х	Applicable for Teleperformance whenever there's a screen recording solution in
these operations using split knowledge and dual control.					under client system responsability
3.7.7 Key management policies and procedures are					
implemented to include the prevention of unauthorized				Х	Applicable for Teleperformance whenever there's a screen recording solution in
substitution of cryptographic keys.					under client system responsability
3.7.8 Key management policies and procedures are					
implemented to include that cryptographic key custodians					
formally acknowledge (in writing or electronically) that they				Х	Applicable for Teleperformance whenever there's a screen recording solution in
understand and accept their key-custodian responsibilities.					under client system responsability
3.7.9 Additional requirement for service providers only: Where a					
service provider shares cryptographic keys with its customers					
for transmission or storage of account data, guidance on secure				, v	Applicable for Teleperformance whenever there's a screen recording solution in
transmission, storage and updating of such keys is documented				Х	under client system responsability
and distributed to the service provider's customers.					
· · · · · · · · · · · · · · · · · · ·					
4: Protect cardholder data with strong cryptography during trans	mission ove	r open, public netwo	rks		
PCI DSS requirement	N/A	Teleperformance	Customer	Shared Responsability	Notes
4.1 Processes and mechanisms for protecting cardholder data					
with strong cryptography during transmission over open, public				Х	Teleperformance Scope covers Teleperformance owned system .
networks are defined and documented.					
4.1.1 All security policies and operational procedures that are					
identified in Requirement 4 are: Documented. Kept up to date.				Х	Teleperformance Scope covers Teleperformance owned system .
In use. Known to all affected parties.					
4.1.2 Roles and responsibilities for performing activities in					
Requirement 4 are documented, assigned, and understood.				Х	Teleperformance Scope covers Teleperformance owned system .
4.2 PAN is protected with strong cryptography during				х	Teleperformance Scope covers Teleperformance owned system .
transmission.				~	
4.2.1 Strong cryptography and security protocols are					
implemented as follows to safeguard PAN during transmission					
over open, public networks:					
Only trusted keys and certificates are accepted. Certificates					
used to safeguard PAN during transmission over open, public					
networks are confirmed as valid and are not expired or				x	Teleperformance Scope covers Teleperformance owned system .

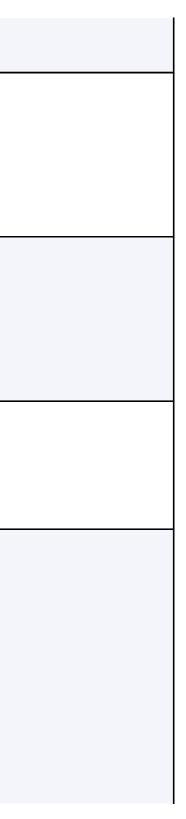

in place. If there's not. This is

	1		1		
The protocol in use supports only secure versions or configurations and does not support fallback to, or use of insecure versions, algorithms, key sizes, or implementations.					
The encryption strength is appropriate for the encryption methodology in use.					
4.2.1.1 An inventory of the entity's trusted keys and certificates used to protect PAN during transmission is maintained.				х	Teleperformance Scope covers Teleperformance owned system .
4.2.1.2 Wireless networks transmitting PAN or connected to the CDE use industry Best practice to implement strong cryptography for authentication and transmission.				Х	Teleperformance Scope covers Teleperformance owned system .
4.2.2 PAN is secured with strong cryptography whenever it is sent via end-user messaging technologies.				Х	Teleperformance Scope covers Teleperformance owned system .
5: Protect all systems and networks from malicious software					
PCI DSS requirement	N/A	Teleperformance	Customer	Shared Responsability	Notes
5.1 Processes and mechanisms for protecting all systems and networks from malicious software are defined and understood.		х			
5.1.1 All security policies and operational procedures that are identified in Requirement 5 are: Documented. Kept up to date. In use. Known to all affected parties.		x			
5.1.2 Roles and responsibilities for performing activities in Requirement 5 are documented, assigned, and understood.		x			
5.2 Malicious software (malware) is prevented, or detected and addressed.		х			
5.2.1 An anti-malware solution(s) is deployed on all system components, except for those system components identified in periodic evaluations per Requirement 5.2.3 that concludes the system components are not at risk from malware.		x			
5.2.2 The deployed anti-malware solution(s):Detects all known types of malware.Removes, blocks, or contains all known types of malware.		x			
 5.2.3 Any system components that are not at risk for malware are evaluated periodically to include the following: A documented list of all system components not at risk for malware. Identification and evaluation of evolving malware threats for those system components. Confirmation whether such system components continue to not require anti-malware protection. 		X			
5.2.3.1 The frequency of periodic evaluations of system components identified as not at risk for malware is defined in the entity's targeted risk analysis, which is performed according to all elements specified in Requirement 12.3.1.		Х			

5.3 Anti-malware mechanisms and processes are active,		x			
maintained, and monitored.					
5.3.1 The anti-malware solution(s) is kept current via automatic updates.		х			
5.3.2 The anti-malware solution(s):					
Performs periodic scans and active or real-time scans.					
OR		Х			
Performs continuous behavioral analysis of systems or					
processes.					
5.3.2.1 If periodic malware scans are performed to meet					
Requirement 5.3.2, the frequency of scans is defined in the		v			
entity's targeted risk analysis, which is performed according to		Х			
all elements specified in Requirement 12.3.1.					
5.3.3 For removable electronic media, the antimalware					
solution(s): Performs automatic scans of when the media is					
inserted, connected, or logically mounted, OR Performs		x			
continuous behavioral analysis of systems or processes when		^			
the media is inserted, connected, or logically mounted.					
5.3.4 Audit logs for the anti-malware solution(s) are enabled and					
retained in accordance with Requirement 10.5.1.		Х			
5.3.5 Anti-malware mechanisms cannot be disabled or altered					
by users, unless specifically documented, and authorized by		х			
management on a case-by-case basis for a limited time period.		~			
5.4 Anti-phishing mechanisms protect users against phishing		х			
attacks.					
5.4.1 Processes and automated mechanisms are in place to		х			
detect and protect personnel against phishing attacks.		~			
6: Develop and Maintain Secure Systems and Software					
PCI DSS requirement	N/A	Teleperformance	Customer	Shared Responsability	Notes
6.1 Processes and mechanisms for developing and maintaining					
secure systems and software are defined and understood.	Х				Teleperformance Current does not develop system for PCI campaings
6.1.1 All security policies and operational procedures that are					
identified in Requirement 6 are: Documented. Kept up to date.	Х				Teleperformance Current does not develop system for PCI campaings
In use. Known to all affected parties.					
6.1.2 Roles and responsibilities for performing activities in					
Requirement 6 are documented, assigned, and understood.	Х				Teleperformance Current does not develop system for PCI campaings
6.2 Bespoke and custom software are developed securely.	Х				Teleperformance Current does not develop system for PCI campaings
6.2.1 Bespoke and custom software are developed securely, as					
follows:					
Based on industry standards and/or Best practice for secure					
development.					
In accordance with PCI DSS (for example, secure	Х				Teleperformance Current does not develop system for PCI campaings
authentication and logging).					
		-			

			_	_
Incorporating consideration of information security issues during each stage of the software development lifecycle.				
 6.2.2 Software development personnel working on bespoke and custom software are trained at least once every 12 months as follows: On software security relevant to their job function and development languages. Including secure software design and secure coding techniques. Including, if security testing tools are used, how to use the tools for detecting vulnerabilities in software. 	Х			Teleperformance Current does not develop system for PCI campaings
 6.2.3 Bespoke and custom software is reviewed prior to being released into production or to customers, to identify and correct potential coding vulnerabilities, as follows: Code reviews ensure code is developed according to secure coding guidelines. Code reviews look for both existing and emerging software vulnerabilities. Appropriate corrections are implemented prior to release. 	Х			Teleperformance Current does not develop system for PCI campaings
 6.2.3.1 If manual code reviews are performed for bespoke and custom software prior to release to production, code changes are: Reviewed by individuals other than the originating code author, and who are knowledgeable about code-review techniques and secure coding practices. Reviewed and approved by management prior to release. 	Х			Teleperformance Current does not develop system for PCI campaings
 6.2.4 Software engineering techniques or other methods are defined and in use by software development personnel to prevent or mitigate common software attacks and related vulnerabilities in bespoke and custom software, including but not limited to the following: Injection attacks, including SQL, LDAP, XPath, or other command, parameter, object, fault, or injection-type flaws. Attacks on data and data structures, including attempts to manipulate buffers, pointers, input data, or shared data. Attacks on cryptography usage, including attempts to exploit weak, insecure, or inappropriate cryptographic implementations, algorithms, cipher suites, or modes of 				
operation.	х			Teleperformance Current does not develop system for PCI campaings

		•		
Attacks on business logic, including attempts to abuse or bypass application features and functionalities through the manipulation of APIs, communication protocols and channels, client side functionality, or other system/application functions and resources. This includes cross-site scripting (XSS) and cross-site request forgery (CSRF). Attacks on access control mechanisms, including attempts to bypass or abuse identification, authentication, or authorization mechanisms, or attempts to exploit weaknesses in the implementation of such mechanisms.				
Attacks via any "high-risk" vulnerabilities identified in the				
vulnerability identification process, as defined in Requirement				
6.3.1.				
6.3 Security vulnerabilities are identified and addressed.6.3.1 Security vulnerabilities are identified and managed as	Х			Teleperformance Current does not develop system for PCI campaings
follows:				
New security vulnerabilities are identified using industry-				
recognized sources for security vulnerability information,				
including alerts from international and national computer				
emergency response teams (Certus).				
Vulnerabilities are assigned a risk ranking based on industry	х		х	Teleperformance scope covers teleperformance systems and infrastrucutre only.
Best practice and consideration of potential impact.				
Risk rankings identify, at a minimum, all vulnerabilities				
considered to be a high-risk or critical to the environment.				
Vulnerabilities for bespoke and custom, and third-party				
software (for example operating systems and databases) are				
covered.				
6.3.2 An inventory of bespoke and custom software, and third-				
party software components incorporated into bespoke and	х			Teleperformance Current does not develop system for PCI campaings
custom software is maintained to facilitate vulnerability and	~			
patch management.				
6.3.3 All system components are protected from known				
vulnerabilities by installing applicable security patches/updates				
as follows:				
Critical or high-security patches/updates (identified according				
to the risk ranking process at Requirement 6.3.1) are installed			Х	Teleperformance scope covers teleperformance systems and infrastrucutre only.
within one month of release.				
All other applicable security patches/updates are installed				
within an appropriate time frame as determined by the entity				
(for example, within three months of release).				
6.4 Public-facing web applications are protected against				
attacks.	Х			Teleperformance Current does not develop system for PCI campaings

owned system and infrastrucuture only.	

7.2.2 Access is assigned to users, including privileged users,				
based on:				
Job classification and function.			Х	Teleperformance Scope covers Teleperformance owned system and infrastrucute
Least privileges necessary to perform job responsibilities.				
7.2.3 Required privileges are approved by authorized personnel.			х	Teleperformance Scope covers Teleperformance owned system and infrastrucut
7.2.4 All user accounts and related access privileges, including				
third-party/vendor accounts, are reviewed as follows: At least				
once every six months.				
To ensure user accounts and access remain appropriate			х	Teleperformance Scope covers Teleperformance owned system and infrastrucute
based on job function.			Χ	
Any inappropriate access is addressed.				
Management acknowledges that access remains appropriate.				
7.2.5 All application and system accounts and related access				
privileges are assigned and managed as follows:				
Based on the least privileges necessary for the operability of			Х	Teleperformance Scope covers Teleperformance owned system and infrastrucute
the system or application.			Λ	
Access is limited to the systems, applications, or processes				
that specifically require their use.				
7.2.5.1 All access by application and system accounts and				
related access privileges are reviewed as follows:				
Periodically (at the frequency defined in the entity's targeted				
risk analysis, which is performed according to all elements				
specified in Requirement 12.3.1).			х	Teleperformance Scope covers Teleperformance owned system and infrastrucute
The application/system access remains appropriate for the			X	
function being performed.				
Any inappropriate access is addressed.				
Management acknowledges that access remains appropriate.				
7.2.6 All user access to query repositories of stored cardholder				
data is restricted as follows:				
Via applications or other programmatic methods, with access				
and allowed actions based on user roles and least privileges.	Х		Х	Teleperformance Scope covers Teleperformance owned system and infrastrucute
Only the responsible administrator(s) can directly access or				
query repositories of stored CHD.				
7.3 Access to system components and data is managed via an			Х	Teleperformance Scope covers Teleperformance owned system and infrastrucuti
access control system(s).				
7.3.1 An access control system(s) is in place that restricts				
access based on a user's need to know and covers all system			Х	Teleperformance Scope covers Teleperformance owned system and infrastrucute
components.				
7.3.2 The access control system(s) is configured to enforce				
permissions assigned to individuals, applications, and systems			Х	Teleperformance Scope covers Teleperformance owned system and infrastrucute
based on job classification and function.				
7.3.3 The access control system(s) is set to "deny all" by			Х	Teleperformance Scope covers Teleperformance owned system and infrastrucution
default.				
8: Identify users and authenticate access to system components	6			

iture only.
iture only.

PCI DSS requirement	N/A	Teleperformance	Customer	Shared Responsability	Notes
8.1 Processes and mechanisms for identifying users and					
authenticating access to system components are defined and				Х	
understood.					
8.1.1 All security policies and operational procedures that are					
identified in Requirement 8 are: Documented. Kept up to date.				Х	
In use. Known to all affected parties.				~	
8.1.2 Roles and responsibilities for performing activities in					
Requirement 8 are documented, assigned, and understood.				Х	
				X	
8.2 User identification and related accounts for users and					
administrators are strictly managed throughout an account's				Х	
lifecycle.				X	
8.2.1 All users are assigned a unique ID before access to system					
components or cardholder data is allowed.				Х	
8.2.2 Group, shared, or generic accounts, or other shared					
authentication credentials are only used when necessary on an					
exception basis, and are managed as follows:					
Account use is prevented unless needed for an exceptional					
circumstance. Use is limited to the time needed for the exceptional					
				Х	
circumstance.					
Business justification for use is documented.					
Use is explicitly approved by management. Individual user					
identity is confirmed before access to an account is granted.					
Every action taken is attributable to an individual user.					
8.2.3 Additional requirement for service providers only: Service					
providers with remote access to customer premises use unique				Х	
authentication factors for each customer premises.					
8.2.4 Addition, deletion, and modification of user IDs,					
authentication factors, and other identifier objects are managed					
as follows:				Х	
Authorized with the appropriate approval.					
Implemented with only the privileges specified on the					
documented approval.				V	
8.2.5 Access for terminated users is immediately revoked.				Х	
8.2.6 Inactive user accounts are removed or disabled within 90				Х	
days of inactivity.					
8.2.7 Accounts used by third parties to access, support, or					
maintain system components via remote access are managed					
as follows:	Х				Third parties do not have access to the CDE.
Enabled only during the time period needed and disabled when					
not in use.					
Use is monitored for unexpected activity.					
8.2.8 If a user session has been idle for more than 15 minutes,		, v			
the user is required to re-authenticate to re-activate the terminal		Х			
or session.					

8.3 Strong authentication for users and administrators is		х			
established and managed.					
8.3.1 All user access to system components for users and					
administrators is authenticated via at least one of the following					
authentication factors:					
Something you know, such as a password or passphrase.		Х			
Something you have, such as a token device or smart card.					
Something you are, such as a biometric element.	1 1				
8.3.2 Strong cryptography is used to render all authentication					
		v			
factors unreadable during transmission and storage on all		Х			
system components.					
8.3.3 User identity is verified before modifying any		Х			
authentication factor.					
8.3.4 Invalid authentication attempts are limited by:					
Locking out the user ID after not more than 10 attempts.		Х			
Setting the lockout duration to a minimum of 30 minutes or					
until the user's identity is confirmed.					
8.3.5 If passwords/passphrases are used as authentication					
factors to meet Requirement 8.3.1, they are set and reset for					
each user as follows:		Х			
Set to a unique value for first-time use and upon reset.					
Forced to be changed immediately after the first use.					
8.3.6 If passwords/passphrases are used as authentication					
factors to meet Requirement 8.3.1, they meet the following					
minimum level of complexity:					
	1	Х			
A minimum length of 12 characters (or IF the system does not					
support 12 characters, a minimum length of eight characters).					
Contain both numeric and alphabetic characters.	1				
8.3.7 Individuals are not allowed to submit a new					
password/passphrase that is the same as any of the last four		Х			
passwords/passphrases used.		-			
8.3.8 Authentication policies and procedures are documented					
and communicated to all users including:					
Guidance on selecting strong authentication factors.					
Guidance for how users should protect their authentication					
factors.		х			
Instructions not to reuse previously used		Λ			
passwords/passphrases.					
Instructions to change passwords/passphrases if there is any					
suspicion or knowledge that the password/passphrases have					
been compromised and how to report the incident.					
9 3 0 If pagewords/pagephrones are used as the aply					
8.3.9 If passwords/passphrases are used as the only					
authentication factor for user access (i.e., in any single-factor					
authentication implementation) then either:	J I		l	I	

Passwords/passphrases are changed at least once every 90 days, OR The security posture of accounts is dynamically analyzed, and real-time access to resources is automatically determined accordingly.	Х		Passwords/passphrases are not used as the only authentication factor, in order t scope, users are required to always use MFA.
8.3.10 Additional requirement for service providers only: If passwords/passphrases are used as the only authentication factor for customer user access to cardholder data (i.e., in any			
single factor authentication implementation), then guidance is provided to customer users including:	Х		Passwords/passphrases are not used as the only authentication factor, in order t scope, users are required to always use MFA.
Guidance for customers to change their user passwords/passphrases periodically. Guidance as to when, and under what circumstances, passwords/passphrases are to be changed.			
 8.3.10.1 Additional requirement for service providers only: If passwords/passphrases are used as the only authentication factor for customer user access (i.e., in any single-factor authentication implementation) then either: Passwords/passphrases are changed at least once every 90 days, OR 	х		Passwords/passphrases are not used as the only authentication factor, in order t scope, users are required to always use MFA.
The security posture of accounts is dynamically analyzed, and real-time access to resources is automatically determined accordingly.			
8.3.11 Where authentication factors such as physical or logical security tokens, smart cards, or certificates are used:			
Factors are assigned to an individual user and not shared among multiple users. Physical and/or logical controls ensure only the intended user can use that factor to gain access.	Х		Genesys does not use security tokens, smart cards, or certificates as part of the
8.4 Multi-factor authentication (MFA) is implemented to secure access into the CDE.		х	
8.4.1 MFA is implemented for all non-console access into the CDE for personnel with administrative access.		х	
8.4.2 MFA is implemented for all access into the CDE.		Х	
8.4.3 MFA is implemented for all remote network access originating from outside the entity's network that could access or impact the CDE as follows:			
All remote access by all personnel, both users and administrators, originating from outside the entity's network.		X	
All remote access by third parties and vendors.			
8.5 Multi-factor authentication (MFA) systems are configured to prevent misuse.		х	
8.5.1 MFA systems are implemented as follows:			
The MFA system is not susceptible to replay attacks.			

ler to access the environment in

er to access the environment in

ler to access the environment in

ne authentication factors.

		_	_	_	
MFA systems cannot be bypassed by any users, including					
administrative users unless specifically documented, and					
authorized by management on an exception basis, for a limited		х			
time period.					
At least two different types of authentication factors are used.					
Success of all authentication factors is required before access					
is granted.					
8.6 Use of application and system accounts and associated	Х				No system or application accounts are being used for interactive login at this tim
authentication factors is strictly managed.	۸				No system of application accounts are being used for interactive togin at this tim
8.6.1 If accounts used by systems or applications can be used					
for interactive login, they are managed as follows:					
Interactive use is prevented unless needed for an exceptional					
circumstance.					
Interactive use is limited to the time needed for the					
exceptional circumstance.	Х				No system or application accounts are being used for interactive login at this tim
Business justification for interactive use is documented.					
Interactive use is explicitly approved by management.					
Individual user identity is confirmed before access to account					
is granted.					
Every action taken is attributable to an individual user.					
8.6.2 Passwords/passphrases for any application and system					
accounts that can be used for interactive login are not hard	N/				
coded in scripts, configuration/property files, or bespoke and	Х				No system or application accounts are being used for interactive login at this tim
custom source code.					
8.6.3 Passwords/passphrases for any application and system					
accounts are protected against misuse as follows:					
Passwords/passphrases are changed periodically (at the					
frequency defined in the entity's targeted risk analysis, which					
is performed according to all elements specified in					
Requirement 12.3.1) and upon suspicion or confirmation of	Х				No system or application accounts are being used for interactive login at this tim
compromise.					
Passwords/passphrases are constructed with sufficient					
complexity appropriate for how frequently the entity changes					
the passwords/passphrases.					
9: Restrict physical access to cardholder data					
PCI DSS requirement	N/A	Teleperformance	Customer	Shared Responsability	Notes

ses. Client application and CHD

 9.2.1.1 Individual physical access to sensitive areas within the CDE is monitored with either video cameras or physical access control mechanisms (or both) as follows: Entry and exit points to/from sensitive areas within the CDE are monitored. Monitoring devices or mechanisms are protected from tampering or disabling. Collected data is reviewed and correlated with other entries. 	x	Teleperformance scope covers only Teleperformance physical or logical premise storaged in clients premises are out of Teleperformance scpoe
Collected data is stored for at least three months, unless otherwise restricted by law.		
9.2.2 Physical and/or logical controls are implemented to restrict use of publicly accessible network jacks within the facility.	x	Teleperformance scope covers only Teleperformance physical or logical premise storaged in clients premises are out of Teleperformance scpoe
9.2.3 Physical access to wireless access points, gateways, networking/communications hardware, and telecommunication lines within the facility is restricted.	x	Teleperformance scope covers only Teleperformance physical or logical premise storaged in clients premises are out of Teleperformance scpoe
9.2.4 Access to consoles in sensitive areas is restricted via locking when not in use.	х	Teleperformance scope covers only Teleperformance physical or logical premise storaged in clients premises are out of Teleperformance scope
9.3 Physical access for personnel and visitors is authorized and managed.	Х	Teleperformance scope covers only Teleperformance physical or logical premise storaged in clients premises are out of Teleperformance scope
 9.3.1 Procedures are implemented for authorizing and managing physical access of personnel to the CDE, including: Identifying personnel. Managing changes to an individual's physical access requirements. Revoking or terminating personnel identification. Limiting access to the identification process or system to authorized personnel. 	x	Teleperformance scope covers only Teleperformance physical or logical premise storaged in clients premises are out of Teleperformance scpoe
 9.3.1.1 Physical access to sensitive areas within the CDE for personnel is controlled as follows: Access is authorized and based on individual job function. Access is revoked immediately upon termination. All physical access mechanisms, such as keys, access cards, etc., are returned or disabled upon termination. 	x	Teleperformance scope covers only Teleperformance physical or logical premise storaged in clients premises are out of Teleperformance scpoe
 9.3.2 Procedures are implemented for authorizing and managing visitor access to the CDE, including: Visitors are authorized before entering. Visitors are escorted at all times. Visitors are clearly identified and given a badge or other identification that expires. Visitor badges or other identification visibly distinguishes visitors from personnel. 	x	Teleperformance scope covers only Teleperformance physical or logical premise storaged in clients premises are out of Teleperformance scpoe
9.3.3 Visitor badges or identification are surrendered or deactivated before visitors leave the facility or at the date of expiration.	X	Teleperformance scope covers only Teleperformance physical or logical premise storaged in clients premises are out of Teleperformance scpoe

ises. Client application and CHD

9.3.4 A visitor log is used to maintain a physical record of visitor activity within the facility and within sensitive areas, including: The visitor's name and the organization represented.		Teleperformance scope covers only Teleperformance physical or logical premise
The date and time of the visit.	Х	storaged in clients premises are out of Teleperformance scpoe
The name of the personnel authorizing physical access.		
Retaining the log for at least three months, unless otherwise		
restricted by law.		
9.4 Media with cardholder data is securely stored, accessed,	v	Teleperformance scope covers only Teleperformance physical or logical premise
distributed, and destroyed.	Х	storaged in clients premises are out of Teleperformance scpoe
9.4.1 All media with cardholder data is physically secured.	х	Teleperformance scope covers only Teleperformance physical or logical premise storaged in clients premises are out of Teleperformance scpoe
9.4.1.1 Offline media backups with cardholder data are stored	× ×	Teleperformance scope covers only Teleperformance physical or logical premise
in a secure location.	Х	storaged in clients premises are out of Teleperformance scpoe
9.4.1.2 The security of the offline media backup location(s) with cardholder data is reviewed at least once every 12 months.	x	Teleperformance scope covers only Teleperformance physical or logical premise storaged in clients premises are out of Teleperformance scpoe
9.4.2 All media with cardholder data is classified in accordance		Teleperformance scope covers only Teleperformance physical or logical premise
with the sensitivity of the data.	Х	storaged in clients premises are out of Teleperformance scpoe
9.4.3 Media with cardholder data sent outside the facility is		
secured as follows:		
Media sent outside the facility is logged.		
Media is sent by secured courier or other delivery method that	х	Teleperformance scope covers only Teleperformance physical or logical premise
can be accurately tracked.		storaged in clients premises are out of Teleperformance scpoe
Offsite tracking logs include details about media location.		
9.4.4 Management approves all media with cardholder data that		
is moved outside the facility (including when media is	Х	Teleperformance scope covers only Teleperformance physical or logical premise
distributed to individuals).		storaged in clients premises are out of Teleperformance scpoe
9.4.5 Inventory logs of all electronic media with cardholder data	v	Teleperformance scope covers only Teleperformance physical or logical premise
are maintained.	Х	storaged in clients premises are out of Teleperformance scpoe
9.4.5.1 Inventories of electronic media with cardholder data are	v	Teleperformance scope covers only Teleperformance physical or logical premise
conducted at least once every 12 months.	*	storaged in clients premises are out of Teleperformance scpoe
9.4.6 Hard-copy materials with cardholder data are destroyed		
when no longer needed for business or legal reasons, as follows:		
Materials are cross-cut shredded, incinerated, or pulped so	х	Teleperformance scope covers only Teleperformance physical or logical premise
that cardholder data cannot be reconstructed.		storaged in clients premises are out of Teleperformance scpoe
Materials are stored in secure storage containers prior to		
destruction.		
9.4.7 Electronic media with cardholder data is destroyed when		
no longer needed for business or legal reasons via one of the		
following:		Teleperformance scope covers only Teleperformance physical or logical premise
The electronic media is destroyed.	Х	storaged in clients premises are out of Teleperformance scpoe
The cardholder data is rendered unrecoverable so that it		
cannot be reconstructed.

9.5.1 POI devices that capture payment card data via direct physical interaction with the payment card form factor are protected from tampering and unauthorized substitution, including the following:					
Maintaining a list of POI devices. Periodically inspecting POI devices to look for tampering or unauthorized substitution.				х	Teleperformance scope covers only Teleperformance physical or logical premise storaged in clients premises are out of Teleperformance scpoe
Training personnel to be aware of suspicious behavior and to report tampering or unauthorized substitution of devices.					
9.5.1.1 An up-to-date list of POI devices is maintained, including: Make and model of the device.					Teleperformance scope covers only Teleperformance physical or logical premise
Location of device. Device serial number or other methods of unique identification.				Х	storaged in clients premises are out of Teleperformance scpoe
9.5.1.2 POI device surfaces are periodically inspected to detect tampering and unauthorized substitution.				х	Teleperformance scope covers only Teleperformance physical or logical premise storaged in clients premises are out of Teleperformance scope
9.5.1.2.1 The frequency of periodic POI device inspections and the type of inspections performed is defined in the entity's targeted risk analysis, which is performed according to all elements specified in Requirement 12.3.1.				х	Teleperformance scope covers only Teleperformance physical or logical premise storaged in clients premises are out of Teleperformance scpoe
9.5.1.3 Training is provided for personnel in POI environments to be aware of attempted tampering or replacement of POI devices, and includes:					
Verifying the identity of any third-party persons claiming to be repair or maintenance personnel, before granting them access to modify or troubleshoot devices.				x	Teleperformance scope covers only Teleperformance physical or logical premise storaged in clients premises are out of Teleperformance scpoe
Procedures to ensure devices are not installed, replaced, or returned without verification. Being aware of suspicious behavior around devices.					
Reporting suspicious behavior and indications of device tampering or substitution to appropriate personnel.					
10: Log and monitor all access to system components and cardho		T-1	Customor		Neter
PCI DSS requirement 10.1 Processes and mechanisms for logging and monitoring all	N/A	Teleperformance	Customer	Shared Responsability	Notes
access to system components and cardholder data are defined and documented.		х			
10.1.1 All security policies and operational procedures that are identified in Requirement 10 are: Documented. Kept up to date. In use. Known to all affected parties.		Х			
 10.1.2 Roles and responsibilities for performing activities in Requirement 10 are documented, assigned, and understood. 		Х			
10.2 Audit logs are implemented to support the detection of anomalies and suspicious activity, and the forensic analysis of events.		х			
10.2.1 Audit logs are enabled and active for all system components and cardholder data.		х			

ises. Client application and CHD

[]				1
10.2.1.1 Audit logs capture all individual user access to	х			
cardholder data.	^			
10.2.1.2 Audit logs capture all actions taken by any individual				
with administrative access, including any interactive use of	Х			
application or system accounts.				
10.2.1.3 Audit logs capture all access to audit logs.	Х			
10.2.1.4 Audit logs capture all invalid logical access attempts.	х			
10.2.1.5 Audit logs capture all changes to identification and				
authentication credentials including, but not limited to:				
Creation of new accounts.	х			
Elevation of privileges.				
All changes, additions, or deletions to accounts with				
administrative access.				
10.2.1.6 Audit logs capture the following: All initialization of new				
audit logs, and All starting, stopping, or pausing of the existing	х			
audit logs.				
10.2.1.7 Audit logs capture all creation and deletion of system-				
level objects.	Х			
10.2.2 Audit logs record the following details for each auditable				
event:				
User identification.				
Type of event.				
Date and time.	Х			
Success and failure indication. Origination of event.				
Identity or name of affected data, system component,				
resource, or service (for example, name and protocol).				
10.3 Audit logs are protected from destruction and unauthorized				
modifications.	Х			
10.3.1 Read access to audit logs files is limited to those with a				
job-related need.	Х			
10.3.2 Audit log files are protected to prevent modifications by				
individuals.	Х			
10.3.3 Audit log files, including those for external facing				
technologies, are promptly backed up to a secure, central,	Х			
internal log server(s) or other media that is difficult to modify.				
10.3.4 File integrity monitoring or change-detection				
mechanisms is used on audit logs to ensure that existing log	Х			
data cannot be changed without generating alerts.				
10.4 Audit logs are reviewed to identify anomalies or suspicious	N N			
activity.	Х			
10.4.1 The following audit logs are reviewed at least once daily:				
All security events.				
Logs of all system components that store, process, or transmit				
CHD and/or SAD.				
Logs of all critical system components.	Х			
	I I	I	1	1

	_			_			
Logs of all servers and system components that perform]						
security functions (for example, network security controls,							
intrusion-detection systems/intrusion-prevention systems							
(IDS/IPS), authentication servers).							
10.4.1.1 Automated mechanisms are used to perform audit log							
reviews.		Х					
10.4.2 Logs of all other system components (those not specified	1						
		Х					
in Requirement 10.4.1) are reviewed periodically.							
10.4.2.1 The frequency of periodic log reviews for all other							
system components (not defined in Requirement 10.4.1) is							
defined in the entity's targeted risk analysis, which is performed		Х					
according to all elements specified in Requirement 12.3.1.							
10.4.3 Exceptions and anomalies identified during the review		v					
process are addressed.		х					
10.5 Audit log history is retained and available for analysis.		Х					
10.5.1 Retain audit log history for at least 12 months, with at							
least the most recent three months immediately available for		х					
analysis.							
10.6 Time-synchronization mechanisms support consistent							
		Х					
time settings across all systems.							
10.6.1 System clocks and time are synchronized using time-							
synchronization technology.10.6.1 System clocks and time are		Х					
synchronized using time-synchronization technology.							
10.6.2 Systems are configured to the correct and consistent							
time as follows:							
One or more designated time servers are in use.							
Only the designated central time server(s) receives time from							
external sources.							
	1						
Time received from external sources is based on International							
Atomic Time or Coordinated Universal Time (UTC).		Х					
The designated time server(s) accept time updates only from							
specific industry-accepted external sources.							
Where there is more than one designated time server, the time							
_							
servers peer with one another to keep accurate time.	- 1						
Internal systems receive time information only from							
designated central time server(s).							
10.6.3 Time synchronization settings and data are protected as							
follows:	4		1				
Access to time data is restricted to only personnel with a		х	1				
business need.		Λ					
Any changes to time settings on critical systems are logged,			1				
monitored, and reviewed.			1				
10.7 Failures of critical security control systems are detected,		<i></i>					
reported, and responded to promptly.		Х					
10.7.1 Additional requirement for service providers only:							
	- I		I	I	I		

 Failures of critical security control systems are detected, alerted, and addressed promptly, including but not limited to failure of the following critical security control systems: Network security controls. IDS/IPS. FIM. Anti-malware solutions. Physical access controls. Logical access controls. Audit logging mechanisms. 		Х			
Segmentation controls (if used).					
10.7.2 Failures of critical security control systems are detected, alerted, and addressed promptly, including but not limited to failure of the following critical security control systems:					
Network security controls.					
IDS/IPS.					
Change-detection mechanisms.		х			
Anti-malware solutions.		~			
Physical access controls.					
Logical access controls.					
Audit logging mechanisms.					
Segmentation controls (if used).					
Audit log review mechanisms.					
Automated security testing tools (if used).					
10.7.3 Failures of any critical security controls systems are					
responded to promptly, including but not limited to:					
Restoring security functions.					
Identifying and documenting the duration (date and time from					
start to end) of the security failure.					
Identifying and documenting the cause(s) of failure and					
documenting required remediation.		х			
Identifying and addressing any security issues that arose		~			
during the failure.					
Determining whether further actions are required as a result of					
the security failure.					
Implementing controls to prevent the cause of failure from					
reoccurring.					
Resuming monitoring of security controls.					
11: Test security of systems and networks regularly					
PCI DSS requirement	N/A	Teleperformance	Customer	Shared Responsability	Notes
11.1 Processes and mechanisms for regularly testing security of					
systems and networks are defined and understood.		Х			
11.1.1 All security policies and operational procedures that are					
identified in Requirement 11 are: Documented. Kept up to date.		Х			
In use. Known to all affected parties.					
11.1.2 Roles and responsibilities for performing activities in					
Requirement 11 are documented, assigned, and understood.		Х			

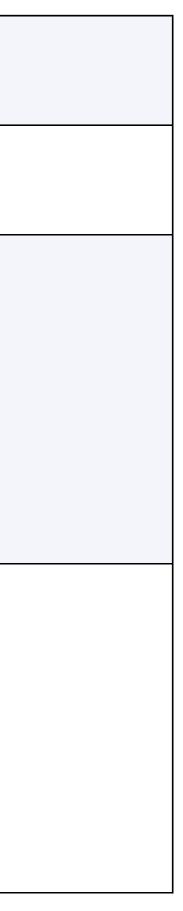

11.2 Wireless access points are identified and monitored, and		Х		
unauthorized wireless access points are addressed.				
11.2.1 Authorized and unauthorized wireless access points are				
managed as follows:				
The presence of wireless (Wi-Fi) access points is tested for, All				
authorized and unauthorized wireless access points are				
detected and identified, Testing, detection, and identification		Х		
occurs at least once every three months.				
	_			
If automated monitoring is used, personnel are notified via				
generated alerts.				
11.2.2 An inventory of authorized wireless access points is		X		
maintained, including a documented business justification.		Х		
11.3 External and internal vulnerabilities are regularly identified,		Х		
prioritized, and addressed.		^		
11.3.1 Internal vulnerability scans are performed as follows: At				
least once every three months.				
High-risk and critical vulnerabilities (per the entity's				
vulnerability risk rankings defined at Requirement 6.3.1)				
are resolved.	- 1			
Rescans are performed that confirm all high-risk and	X	X		
critical vulnerabilities (as noted above) have been resolved.				
Scan tool is kept up to date with latest vulnerability				
information.				
Scans are performed by qualified personnel and	-			
organizational independence of the tester exists.				
11.3.1.1 All other applicable vulnerabilities (those not ranked as				
high-risk or critical per the entity's vulnerability risk rankings				
defined at Requirement 6.3.1) are managed as follows:				
		Х		
Addressed based on the risk defined in the entity's targeted		~		
risk analysis, which is performed according to all elements				
specified in Requirement 12.3.1.				
Rescans are conducted as needed.				
11.3.1.2 Internal vulnerability scans are performed via				
authenticated scanning as follows:	4			
Systems that are unable to accept credentials for				
authenticated scanning are documented.	4			
Sufficient privileges are used for those systems that accept		Х		
credentials for scanning.	4			
If accounts used for authenticated scanning can be used for				
interactive login, they are managed in accordance with				
Requirement 8.2.2.				
11.3.1.3 Internal vulnerability scans are performed after any				
significant change as follows:	4			
High-risk and critical vulnerabilities (per the entity's				
vulnerability risk rankings defined at Requirement 6.3.1) are		х		
resolved.				

Rescans are conducted as needed. Scans are performed by							
qualified personnel and organizational independence of the							
tester exists (not required to be a QSA or ASV).							
11.3.2 External vulnerability scans are performed as follows: At							
least once every three months.							
By a PCI SSC Approved Scanning Vendor (ASV).							
Vulnerabilities are resolved and ASV Program Guide	v						
requirements for a passing scan are met.	Х						
Rescans are performed as needed to confirm that							
vulnerabilities are resolved per the ASV Program Guide							
requirements for a passing scan.							
11.3.2.1 External vulnerability scans are performed after any							
significant change as follows:							
Vulnerabilities that are scored 4.0 or higher by the CVSS are							
resolved.	N N						
Rescans are conducted as needed.	Х						
Scans are performed by qualified personnel and organizational							
independence of the tester exists (not required to be a QSA or							
ASV).							
11.4 External and internal penetration testing is regularly							
performed, and exploitable vulnerabilities and security	Х						
weaknesses are corrected.							
11.4.1 A penetration testing methodology is defined,							
documented, and implemented by the entity, and includes:							
Industry-accepted penetration testing approaches.							
Coverage for the entire CDE perimeter and critical systems.							
Testing from both inside and outside the network.							
Testing to validate any segmentation and scope reduction							
controls.							
Application-layer penetration testing to identify, at a minimum,							
the vulnerabilities listed in Requirement 6.2.4.	v						
Network-layer penetration tests that encompass all	1 ×	1 X	Х	X	X	X	
components that support network functions as well as							
operating systems.							
Review and consideration of threats and vulnerabilities							
experienced in the last 12 months.							
Documented approach to assessing and addressing the risk							
posed by exploitable vulnerabilities and security weaknesses							
found during penetration testing.							
Retention of penetration testing results and remediation							
activities results for at least 12 months.							
11.4.2 Internal penetration testing is performed: Per the entity's							
defined methodology, At least once every 12 months After any							
significant infrastructure or application upgrade or change By a	х						
qualified internal resource or qualified external third-party	^						
Organizational independence of the tester exists (not required							
to be a QSA or ASV).							

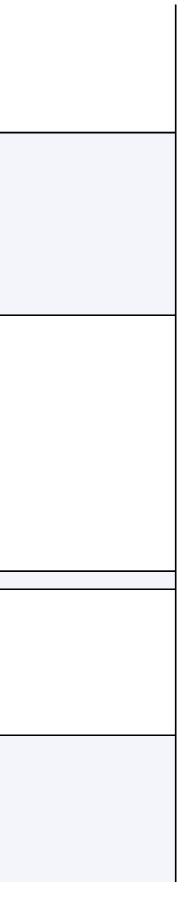

11.4.3 External penetration testing is performed: Per the entity's defined methodology At least once every 12 months After any significant infrastructure or application upgrade or change By a qualified internal resource or qualified external third party Organizational independence of the tester exists (not required to be a QSA or ASV).	Х		
11.4.4 Exploitable vulnerabilities and security weaknesses found during penetration testing are corrected as follows: In accordance with the entity's assessment of the risk posed by the security issue as defined in Requirement 6.3.1. Penetration testing is repeated to verify the corrections.	Х		
 11.4.5 If segmentation is used to isolate the CDE from other networks, penetration tests are performed on segmentation controls as follows: At least once every 12 months and after any changes to segmentation controls/methods Covering all segmentation controls/methods in use. According to the entity's defined penetration testing methodology. Confirming that the segmentation controls/methods are operational and effective, and isolate the CDE from all out-of-scope systems. Confirming effectiveness of any use of isolation to separate systems with differing security levels (see Requirement 2.2.3). Performed by a qualified internal resource or qualified external third party. Organizational independence of the tester exists (not required to be a QSA or ASV). 	Х		
 11.4.6 Additional requirement for service providers only: If segmentation is used to isolate the CDE from other networks, penetration tests are performed on segmentation controls as follows: At least once every six months and after any changes to segmentation controls/methods. Covering all segmentation controls/methods in use. According to the entity's defined penetration testing methodology. Confirming that the segmentation controls/methods are operational and effective, and isolate the CDE from all out-of- scope systems. Confirming effectiveness of any use of isolation to separate systems with differing security levels (see Requirement 2.2.3). Performed by a qualified internal resource or qualified external third party. Organizational independence of the tester exists (not required to be a QSA or ASV). 	Х		

11.4.7 Additional requirement for multi-tenant service providers only: Multi-tenant service providers support their customers for external penetration testing per Requirement 11.4.3 and 11.4.4 .	Х				Not a multi-tenant service provider
11.5 Network intrusions and unexpected file changes are detected and responded to.		Х			
 11.5.1 Intrusion-detection and/or intrusion prevention techniques are used to detect and/or prevent intrusions into the network as follows: All traffic is monitored at the perimeter of the CDE. 					
All traffic is monitored at critical points in the CDE. Personnel are alerted to suspected compromises. All intrusion-detection and prevention engines, baselines, and signatures are kept up to date.		X			
11.5.1.1 Additional requirement for service providers only: Intrusion-detection and/or intrusion-prevention techniques detect, alert on/prevent, and address covert malware communication channels.		х			
11.5.2 A change-detection mechanism (for example, file integrity monitoring tools) is deployed as follows:					
To alert personnel to unauthorized modification (including changes, additions, and deletions) of critical files.		Х			
To perform critical file comparisons at least once weekly.					
11.6 Unauthorized changes on payment pages are detected and responded to.	Х				
11.6.1 A change- and tamper-detection mechanism is deployed as follows:					
To alert personnel to unauthorized modification (including indicators of compromise, changes, additions, and deletions) to the HTTP headers and the contents of payment pages as received by the consumer browser.					
The mechanism is configured to evaluate the received HTTP header and payment page. The mechanism functions are performed as follows: At least once every seven days OR		X			
Periodically (at the frequency defined in the entity's targeted risk analysis, which is performed according to all elements specified in Requirement 12.3.1). 12: Support information security with organizational policies and	nrograms				
PCI DSS requirement	N/A	Teleperformance	Customer	Shared Responsability	Notes
12.1 A comprehensive information security policy that governs and provides direction for protection of the entity's information		Totoporromanee			
assets is known and current. 12.10 Suspected and confirmed security incidents that could impact the CDE are responded to		Х			

12.1.1 An overall information security policy is: Established.					
Published. Maintained. Disseminated to all relevant personnel,					
as well as to relevant vendors and business partners.		Х			
12.1.2 The information security policy is: Reviewed at least once					
every 12 months. Updated as needed to reflect changes to		N.			
business objectives or risks to the environment.		Х			
12.1.3 The security policy clearly defines information security					
roles and responsibilities for all personnel, and all personnel are		V			
aware of and acknowledge their information security		Х			
responsibilities.					
12.1.4 Responsibility for information security is formally					
assigned to a Chief Information Security Officer or other		N N			
information security knowledgeable member of executive		Х			
management.					
12.2 Acceptable use policies for end-user technologies are		V			
defined and implemented.		Х			
12.2.1 Acceptable use policies for end-user technologies are					
documented and implemented, including:					
Explicit approval by authorized parties.		х			
Acceptable uses of the technology.		^			
List of products approved by the company for employee use,					
including hardware and software.					
12.3 Risks to the cardholder data environment are formally		х			
identified, evaluated, and managed.		Λ			
12.3.1 Each PCI DSS requirement that provides flexibility for					
how frequently it is performed (for example, requirements to be					
performed periodically) is supported by a targeted risk analysis					
that is documented and includes:	1				
Identification of the assets being protected.					
Identification of the threat(s) that the requirement is protecting					
against.					
Identification of factors that contribute to the likelihood and/or					
impact of a threat being realized.	4	х			
Resulting analysis that determines, and includes justification					
for, how frequently the requirement must be performed to					
minimize the likelihood of the threat being realized.					
	-				
Review of each targeted risk analysis at least once every 12					
months to determine whether the results are still valid or if an					
updated risk analysis is needed.	-				
Performance of updated risk analyses when needed, as					
determined by the annual review.					
12.3.2 A targeted risk analysis is performed for each PCI DSS					
requirement that the entity meets with the customized					
approach, to include:	J		l	I	I

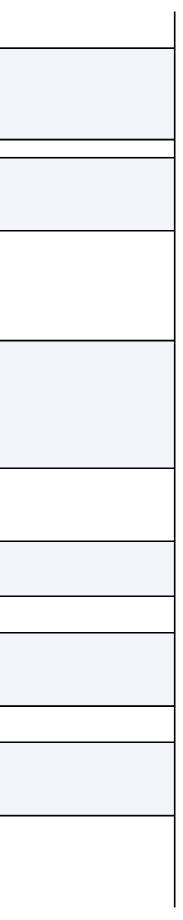

Documented evidence detailing each element specified in Appendix D: Customized Approach (including, at a minimum, a]	x		
controls matrix and risk analysis). Approval of documented evidence by senior management.				
Performance of the targeted analysis of risk at least once every 12 months.				
12.3.3 Cryptographic cipher suites and protocols in use are documented and reviewed at least once every 12 months, including at least the following:				
An up-to-date inventory of all cryptographic cipher suites and protocols in use, including purpose and where used.		х		
Active monitoring of industry trends regarding continued viability of all cryptographic cipher suites and protocols in use.				
A documented strategy to respond to anticipated changes in cryptographic vulnerabilities.				
12.3.4 Hardware and software technologies in use are reviewed at least once every 12 months, including at least the following:				
 Analysis that the technologies continue to receive security fixes from vendors promptly. Analysis that the technologies continue to support (and do not preclude) the entity's PCI DSS compliance. Documentation of any industry announcements or trends related to a technology, such as when a vendor has announced 		x		
 "end of life" plans for a technology. Documentation of a plan, approved by senior management, to remediate outdated technologies, including those for which vendors have announced "end of life" plans. 				
12.4 PCI DSS compliance is managed.		Х		
12.4.1 Additional requirement for service providers only:Responsibility is established by executive management for the protection of cardholder data and a PCI DSS compliance program to include:		x		
Overall accountability for maintaining PCI DSS compliance. Defining a charter for a PCI DSS compliance program and communication to executive management.				
 12.4.2 Additional requirement for service providers only: Reviews are performed at least once every three months to confirm that personnel are performing their tasks in accordance with all security policies and operational procedures. Reviews are performed by personnel other than those responsible for performing the given task and include, but are 		x		
not limited to, the following tasks:				

	_				
Daily log reviews. Configuration reviews for network security controls.					
Applying configuration standards to new systems.					
Responding to security alerts. Change-management					
processes.					
12.4.2.1 Additional requirement for service providers					
only: Reviews conducted in accordance with Requirement					
12.4.2 are documented to include:					
Results of the reviews.					
Documented remediation actions taken for any tasks that were		Х			
found to not be performed at Requirement 12.4.2.					
Review and sign-off of results by personnel assigned					
responsibility for the PCI DSS compliance program.					
12.5 PCI DSS scope is documented and validated.		Х			
12.5.1 An inventory of system components that are in scope for					
PCI DSS, including a description of function/use, is maintained		Х			
and kept current.					
12.5.2 PCI DSS scope is documented and confirmed by the					
entity at least once every 12 months and upon significant					
change to the in-scope environment. At a minimum, the scoping					
validation includes:					
Identifying all data flows for the various payment stages (for					
example, authorization, capture settlement, chargebacks, and					
refunds) and acceptance channels (for example, card-present,					
card-not-present, and e-commerce).					
Updating all data-flow diagrams per Requirement 1.2.4.					
Identifying all locations where account data is stored,					
processed, and transmitted, including but not limited to: 1)					
any locations outside of the currently defined CDE, 2)					
applications that process CHD, 3) transmissions between		Х			
systems and networks, and 4) file backups.					
Identifying all system components in the CDE, connected to					
the CDE, or that could impact security of the CDE.					
Identifying all segmentation controls in use and the					
environment(s) from which the CDE is segmented, including					
justification for environments being out of scope.					
Identifying all connections from third-party entities with					
access to the CDE.					
Confirming that all identified data flows, account data, system					
components, segmentation controls, and connections from					
third parties with access to the CDE are included in scope.					
12.5.2.1 Additional requirement for service providers only:					
PCI DSS scope is documented and confirmed by the entity at	1				
least once every six months and upon significant change to the					
in-scope environment.		Х			
Sheer and a second s	1	I	Į.	I	•

	1 1	1	
At a minimum, the scoping validation includes all the elements			
specified in Requirement 12.5.2.			
12.5.3 Additional requirement for service providers only:			
Significant changes to organizational structure result in a			
documented (internal) review of the impact to PCI DSS scope	Х		
and applicability of controls, with results communicated to			
executive management.			
12.6 Security awareness education is an ongoing activity.	X		
12.6.1 A formal security awareness program is implemented to			
make all personnel aware of the entity's information security	Х		
policy and procedures, and their role in protecting the	^		
cardholder data.			
12.6.2 The security awareness program is: Reviewed at least			
once every 12 months, and Updated as needed to address any			
new threats and vulnerabilities that may impact the security of			
the entity's CDE, or the information provided to personnel about	Х		
their role in protecting cardholder data.			
12.6.3 Personnel receive security awareness training as follows:			
Upon hire and at least once every 12 months. Multiple			
methods of communication are used.	Х		
Personnel acknowledge at least once every 12 months that			
they have read and understood the information security policy			
and procedures.			
12.6.3.1 Security awareness training includes awareness of			
threats and vulnerabilities that could impact the security of the	Х		
CDE, including but not limited to: Phishing and related attacks.	^		
Social engineering.			
12.6.3.2 Security awareness training includes awareness about			
the acceptable use of end-user technologies in accordance with	х		
Requirement 12.2.1.			
12.7 Personnel are screened to reduce risks from insider			
threats.	Х		
12.7.1 Potential personnel who will have access to the CDE are			
screened, within the constraints of local laws, prior to hire to			
minimize the risk of attacks from internal sources.	Х		
12.8 Risk to information assets associated with third-party	Х		
service provider (TPSP) relationships is managed.			
12.8.1 A list of all third-party service providers (TPSPs) with			
which account data is shared or that could affect the security of	Х		
account data is maintained, including a description for each of	~		
the services provided.			
12.8.2 Written agreements with TPSPs are maintained as			
follows:			
Written agreements are maintained with all TPSPs with which			
account data is shared or that could affect the security of the			
CDE.			

_	I	1 1	
Written agreements include acknowledgments from TPSPs	Х		
that they are responsible for the security of account data the			
TPSPs possess or otherwise store, process, or transmit on			
behalf of the entity, or to the extent that they could impact the			
security of the entity's CDE.			
12.8.3 An established process is implemented for engaging			
TPSPs, including proper due diligence prior to engagement.	Х		
12.8.4 A program is implemented to monitor TPSPs' PCI DSS	Х		
compliance status at least once every 12 months.	~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~		
12.8.5 Information is maintained about which PCI DSS			
requirements are managed by each TPSP, which are managed by	Х		
the entity, and any that are shared between the TPSP and the	~		
entity.			
12.9 Third-party service providers (TPSPs) support their	Х		
customers' PCI DSS compliance.	^		
12.9.1 Additional requirement for service providers only: TPSPs			
acknowledge in writing to customers that they are responsible			
for the security of account data the TPSP possesses or	Y		
otherwise stores, processes, or transmits on behalf of the	Х		
customer, or to the extent that they could impact the security of			
the customer's CDE.			
12.9.2 Additional requirement for service providers only: TPSPs			
support their customers' requests for information to meet			
Requirements 12.8.4 and 12.8.5 by providing the following upon			
customer request:			
PCI DSS compliance status information for any service the	х		
TPSP performs on behalf of customers (Requirement 12.8.4).			
Information about which PCI DSS requirements are the			
responsibility of the TPSP and which are the responsibility of			
the customer, including any shared responsibilities			
(Requirement 12.8.5).			
12.10 Suspected and confirmed security incidents that could			
impact the CDE are responded to immediately.	Х		
12.10.1 An incident response plan exists and is ready to be			
activated in the event of a suspected or confirmed security			
incident. The plan includes, but is not limited to:			
Roles, responsibilities, and communication and contact			
strategies in the event of a suspected or confirmed security			
incident, including notification of payment brands and			
acquirers, at a minimum.			
Incident response procedures with specific containment and			
mitigation activities for different types of incidents.	Х		
Business recovery and continuity procedures. Data backup			
processes.			
Analysis of legal requirements for reporting compromises.			
	I I	I I	l

	1		I	I	I
Coverage and responses of all critical system components.					
Reference or inclusion of incident response procedures from	-				
the payment brands.					
12.10.2 At least once every 12 months, the security incident					
response plan is:					
Reviewed and the content is updated as needed.	1	х			
	1				
Tested, including all elements listed in Requirement 12.10.1.					
12.10.3 Specific personnel are designated to be available on a					
24/7 basis to respond to suspected or confirmed security		Х			
incidents.					
12.10.4 Personnel responsible for responding to suspected and					
confirmed security incidents are appropriately and periodically		х			
trained on their incident response responsibilities.		~			
12.10.4.1 The frequency of periodic training for incident					
response personnel is defined in the entity's targeted risk		х			
analysis, which is performed according to all elements specified		~			
in Requirement 12.3.1.					
12.10.5 The security incident response plan includes monitoring					
and responding to alerts from security monitoring systems,					
including but not limited to:					
Intrusion-detection and intrusion-prevention systems.					
Network security controls.		Х			
Change-detection mechanisms for critical files.					
The change-and tamper-detection mechanism for payment					
pages. This bullet is a best practice until its effective date.					
12.10.6 The security incident response plan is modified and					
		V			
evolved according to lessons learned and to incorporate		Х			
industry developments. 12.10.7 Incident response procedures are in place, to be					
initiated upon the detection of stored PAN anywhere it is not					
expected, and include: Determining what to do if PAN is discovered outside the CDE,	-				
-					
including its retrieval, secure deletion, and/or migration into					
the currently defined CDE, as applicable. Identifying whether sensitive authentication data is stored with	-	Х			
PAN.					
Determining where the account data came from and how it	1				
ended up where it was not expected.					
Remediating data leaks or process gaps that resulted in the					
account data being where it was not expected.
